Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT   New human cannabinoid (CB) 1b receptor polypeptides and nucleic acid

```
PT   molecules, useful for diagnosing, preventing or treating CB-associated
PT   disorders e.g. obesity, pain, anxiety or neurological disorders and in
PT   drug screening.
XX
PS   Claim 1; SEQ ID NO 1; 34pp; English.
XX
CC   The invention relates to a novel splice variant, CB1b (ADM82794), of the
CC   human cannabinoid 1 (CB1) receptor and nucleic acids encoding it
CC   (ADM82793). Compared with the known CB1 receptor, the CB1b receptor has a
CC   deletion of 33 residues towards the N-terminus (residues 22-54 of the CB1
CC   receptor). The invention also relates to sequences at least 95% identical
CC   to the CB1b receptor nucleic acid and protein sequences of the invention;
CC   vectors and host cells comprising a CB1b receptor nucleic acid sequence;
CC   a method for the recombinant production of the CB1b receptor; a method of
CC   detecting a CB1b receptor nucleic acid; methods of screening or
CC   identifying compounds which bind to the CB1b receptor; CB1b receptor
CC   agonists, antagonists, inverse agonists or modulators and pharmaceutical
CC   compositions containing them; and methods of treating or preventing a
CC   disorder associated with cannabinoid receptors. The pharmaceutical
CC   compositions and methods of the invention are useful in diagnosing,
CC   preventing or treating CB receptor-associated disorders such as obesity,
CC   pain, psychiatric disorders (e.g. depression or anxiety) or neurological
CC   disorders (e.g. Parkinson's disease or Alzheimer's disease). The present
CC   sequence represents cDNA encoding the human CB1b receptor.

PT   New compound for treating, imaging, diagnosing or prognosing mantle cell
PT   lymphoma, comprises a binding moiety (e.g. antibody) that binds to a
PT   protein (e.g. human autotaxin polypeptide), and a further moiety (e.g.
PT   nucleic acid).
XX
PS   Disclosure; SEQ ID NO 38; 342pp; English.
XX
CC   The invention relates to a compound comprising a binding moiety which
CC   selectively binds to a protein or polypeptide listed in the specification
CC   (e.g. human autotaxin polypeptide or human CD24 signal transducer
CC   polypeptide), and a further moiety. The compound is useful in medicine or
CC   in the treatment, imaging, diagnosis or prognosis of mantle cell
CC   lymphoma (MCL). It is used in preparing a medicament for treating MCL, a
CC   diagnostic or prognostic agent for MCL, or an agent for imaging MCL cells
CC   in the body of an individual. This sequence corresponds to a gene
CC   encoding one of the polypeptides of the invention.

PT   Determining if an individual is predisposed to osteoporosis comprises
PT   detecting an osteoporosis-associated genotype, in a homozygous form.
PT   heterozygous form, in the CNR2 locus.
XX
PS   Example 3; SEQ ID NO 24; 39pp; English.
XX
CC   The present invention relates to a method of determining if an individual
CC   is predisposed to osteoporosis. The method involves detecting an
CC   osteoporosis-associated genotype, in a homozygous or heterozygous form,
CC   in the CNR2 locus encoding the cannabinoid receptor 2 (CB2) protein. The
CC   invention further provides identification of an osteoporosis risk
CC   haplotype using single nucleotide polymorphisms (SNPs) present in the
CC   CNR2 locus. The method, kit and pharmaceutical composition of the
CC   invention are useful for diagnosing, delaying onset of, preventing and
CC   treating osteoporosis. The present sequence is a human CB1 cannabinoid
CC   receptor gene (CNR1) which is located on human chromosome 6q14-q15.

PT   New human genome-derived single exon nucleic acid probes useful for human
PT   gene expression analysis, for identifying or characterizing alternative
PT   splicing events, for assessing genomic alterations or as tools for
PT   surveying tissues.
XX
PS   Claim 1; SEQ ID NO 24875; 80pp; English.

CC   The invention relates to a nucleic acid probe for measuring human gene
CC   expression, comprising any of the 27,400 fully defined nucleotide
CC   sequences in the specification, or their complements or fragments, and
CC   encoding at least 8 amino acids of any of the 6888 amino acid sequences
CC   fully defined in the specification. The probe is a single exon probe that
CC   hybridises under high stringency conditions to a nucleic acid molecule
CC   expressed in human cells or tissues. Also included are a spatially-
CC   addressable set of single exon nucleic acid probes for measuring human
CC   gene expression (comprising a plurality of single exon nucleic acid
CC   probes cited above, where each of the plurality of probes is separately
CC   and addressably isolatable or amplifiable from the plurality), a single
CC   exon microarray for measuring human gene expression, a method of
CC   measuring human gene expression, a vector comprising the single exon
CC   probe cited above, an ORF-encoded peptide comprising at least 8
CC   contiguous amino acids of any of the above-mentioned amino acid
CC   sequences (optionally with conservative amino acid substitution), an
CC   isolated antibody that binds specifically to a peptide cited above, and
CC   methods of selling and/or licensing single exon probes or microarrays to
CC   a customer desiring to measure gene expression, a method of providing
CC   human gene expression data by subscription, and a computer-readable
CC   storage medium which contains a database having a plurality of records
CC   (each record including data on the expression of a single exon probe
CC   cited above. The probe, methods and apparatus are useful in gene
CC   expression analysis. The probes may be used as tools for surveying
CC   tissues to detect the presence of expressed messages that contain their
CC   specific exon, or in constructing genome-derived single exon microarrays.
CC   In addition, the probes are used in identifying and characterising
CC   alternative splicing events, that includes their exon, in assessing
CC   smaller genomic alterations, in priming the synthesis of nucleic acids,
CC   or in expressing the ORF-encoded peptide. The present sequence is a human
CC   single exon probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030194704

PT   DNA encoding mammalian cannabinoid receptor - used for producing receptor
PT   for screening mammalian cannabinoid receptor drugs and ligands and in detection.
XX
PS   Disclosure; Fig 5; 25pp; English.
XX
CC   SKR6 cDNA encoding the rat cannabinoid receptor was isolated from a rat
CC   cerebral cortex cDNA library. An EcoRI-XbaI fragment was used to screen a
CC   human cosmid library. A positive clone was identified and sequenced.
CC   There is ca. 97 per cent homology between the deduced amino acid
CC   sequences of the human and rat cannabinoid receptors. (N.B. the
CC   nucleotide sequence encoding the rat cannabinoid receptor is also given
CC   in the Specification but the copy quality is extremely poor; hence it is
CC   not included in N-Geneseq). Recombinantly produced receptor can be used
CC   to screen for new drugs suitable for treatment of cannabinoid-treatable
CC   conditions, e.g. glaucoma, bronchial asthma, etc. See also AAR14195.
CC   (Note: Revised entry submitted to correct the patent number format of US
CC   Government-owned NTIS applications to prevent clashes with ongoing US
CC   granted patent numbers. For further information please visit the Derwent
CC   web site at www.derwent.com/dwpi/updates/ntis_us.html.) (Updated on 25-
CC   MAR-2003 to correct PA field.)

PT   New isolated antigenic peptides e.g. for G protein-coupled receptors
PT   (GPCR), useful for diagnosing and designing drugs for treating conditions
PT   in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or
PT   autoimmune diseases.
XX
PS   Disclosure; Fig 1; 523pp; English.
XX

The present invention describes antigenic peptides (I) comprising: (a)
any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino
acids. Also described: (1) an assay for the detection of a particular G
protein-coupled receptor (GPCR) or a candidate polypeptide in a sample;
and (2) an isolated antibody having high specificity and high affinity or
avidity for a particular GPCR. (I) can be used as GPCR modulators and in
gene therapy. The antigenic peptides for GPCRs are useful in detecting an
antibody against a particular GPCR, and in the production of specific
antibodies. The peptides and antibodies are also useful for detecting the
presence or absence of corresponding GPCRs. The antigenic peptides for
GPCRs and antibodies are useful for diagnosing and designing drugs for
treating immune-related diseases, growth-related diseases, cell
regeneration-related disease, immunological-related cell proliferative
diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease,
atherosclerosis, bacterial, fungal, protozoan or viral infections,
osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute
inflammation, allergies, Crohn's disease, diabetes, graft versus host
disease, Parkinson's disease, multiple sclerosis, pain, psoriasis,
anxiety, depression, schizophrenia, dementia, mental retardation, memory
loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension,
hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or
any other disorder in which GPCRs are involved. The antibodies may be
used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42869 encode

CC   GPCR proteins given in ABP81675 to ABP82018, which are used in the
CC   exemplification of the present invention

PT       Determining the presence or absence of a pathological cell in a patient,
PT       useful for diagnosing, prognosing or treating cancer, comprises detecting
PT       a nucleic acid in a biological sample.
XX
PS       Claim 8; SEQ ID NO 235; 1385pp; English.
XX
CC       The invention relates to nucleic acids and proteins (ADN38683-ADN40064)
CC       whose expression is upregulated or downregulated in specific cancers or
CC       other diseases such as angiogenic or fibrotic disorders, and to methods
CC       of determining the presence or absence of a pathological cell in a
CC       patient by detecting a nucleic acid at least 80% identical to those of
CC       the invention or by detecting a polypeptide of the invention. The
CC       invention also relates to expression vectors and host cells comprising a
CC       nucleic acid of the invention; antibodies which specifically bind a
CC       polypeptide of the invention; use of such antibodies for drug targeting;
CC       and methods of screening for modulators of activity or expression of the
CC       polypeptides and nucleic acids. The nucleic acids, polypeptides,
CC       antibodies and methods are useful for diagnosing, prognosing and treating
CC       cancer and other conditions such as psoriasis, ischaemia, heart disease,
CC       atherosclerosis, inflammatory diseases, autoimmune diseases, retinal
CC       neovascularisation syndromes, scarring and uterine fibroids. They may
CC       also be useful in wound healing and in contraception. The present
CC       sequence represents a nucleic acid sequence of the invention.

PT   New tumor-associated antigenic target polypeptides and nucleic acids,
PT   useful in preparing a medicament for treating or detecting a
PT   proliferative disorder, e.g. breast, lung, colorectal, ovarian or
PT   prostate cancer or tumor.
XX
PS   Claim 1; SEQ ID NO 2079; 7273pp; English.
XX
CC   The invention relates to human tumour-associated antigenic target (TAT)
CC   polypeptides, and their related nucleic acids. The TAT polypeptides are
CC   overexpressed in cancer tissues compared to normal tissues, and may thus
CC   serve as effective targets for the diagnosis and treatment of cancer in
CC   mammals. The invention also relates to nucleic acid and polypeptide
CC   sequences at least 80% identical to the TAT nucleic acids and
CC   polypeptides; expression vectors and host cells comprising a TAT nucleic
CC   acid; an antibody specific for a TAT polypeptide; a peptide or organic
CC   molecule which binds to a TAT polypeptide; fusion proteins comprising a
CC   TAT polypeptide; and methods for the treatment or
CC   diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,
CC   antibodies, antagonists, binding molecules and compositions are useful
CC   for diagnosing or treating a cell proliferative disorder associated with
CC   increased TAT expression, particularly cancers such as breast cancer,
CC   colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder
CC   cancer, pancreatic cancer, cervical cancer, cancers of the central
CC   nervous system, melanoma and leukaemia. TAT nucleic acids may further be
CC   used as hybridisation probes, in chromosome and gene mapping, in
CC   chromosome identification and in gene therapy. The present sequence
CC   represents a TAT nucleic acid of the invention

PT   Screening test compounds that reduce and/or prevent obesity involves
PT   contacting cell expressing gene from alpha-two-glycoprotein.
XX
PS   Claim 8; SEQ ID NO 27; 21pp; English.
XX
CC   The invention relates to a novel method for screening for test compounds
CC   that reduce and/or prevent obesity. The method comprises contacting a
CC   cell expressing a gene selected from SEQ ID NO. 1-12 or 25-85, with a
CC   compound. The method of the invention demonstrates anorectic and/or prevent
CC   obesity. The current sequence is that of the human cannabinoid receptor 1
CC   (brain) variant 1 DNA of the invention. The sequence listing for the
CC   specification can be located via the USPTO web-site.

PT   New combination comprising several cDNAs, useful for preparing a
PT   composition for diagnosing or treating diabetes mellitus, obesity,
PT   hypertension, atherosclerosis, or cancer of the breast, prostate or
PT   colon.
XX
PS   Claim 1; Page 75-77; 84pp; English.
XX
CC   Then invention relates to a new combination comprising 55 cDNAs (ADA24485
CC   -ADA24539)or their complements that are differentially regulated in an
CC   adipose sample. Also included are detecting differential expression of
CC   one or more cDNAs in a sample containing nucleic acids, screening several
CC   molecules or compounds to identify a ligand that specifically binds a
CC   cDNA, a vector comprising the cDNA, a host cell containing the vector,
CC   producing a protein, screening several molecules or compounds, producing
CC   an antibody and the isolated antibody. The cDNAs comprise sequences which
CC   are upregulated or downregulated in response to peroxisome proliferator-
CC   activated receptor gamma (PPARgamma) agonist. The combination comprising
CC   several cDNAs is useful for preparing a composition for diagnosing or
CC   treating diabetes mellitus, obesity, hypertension, atherosclerosis,
CC   cancer of the breast, prostate or colon, or polycystic ovarian syndrome.

CC   The invention relates to a method for identifying an inverse agonist of a
CC   cannabinoid (CB) receptor comprising contacting a CB receptor test
CC   inhibitory agent with the cell expressing the constitutively active CB
CC   receptor. The method is useful in identifying an inverse agonist of a CB
CC   receptor. The true antagonist or inverse agonist is useful in preparing a
CC   medicament for treating a disorder associated with a CB
CC   receptor. The disorder is obesity, psychiatric and neurological
CC   disorders. They are also useful in treating immune cardiovascular,
CC   reproductive and endocrine disorders and also diseases related to
CC   respiratory and gastrointestinal systems. The current sequence represents
CC   the hCB-1 double constitutive mutant encoding DNA.

PT   Novel mammalian G protein coupled receptors, useful for identifying
PT   compounds that modulates diagnosing and treating disease condition
PT   associated with GPCR dysfunction e.g. autoimmune diseases, angina
PT   pectoris, Parkinson's disease.
XX
PS   Claim 151; SEQ ID NO 951; 542pp; English.
XX
CC   The invention relates to human and mouse G protein-coupled receptors
CC   (GPCRs) and nucleic acids encoding them. The invention also relates to
CC   sequences at least 90% identical to the GPCR proteins and nucleic acids
CC   of the invention; methods of treating, preventing or diagnosing diseases
CC   associated with GPCRs of the invention; methods of screening for
CC   compounds useful in the treatment of GPCR-related diseases; a transgenic
CC   mouse comprising a GPCR gene of the invention; a mouse comprising a
CC   mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived
CC   from the transgenic mice; kits comprising several mice, each of which has
CC   a mutation in a different GPCR gene of the invention; and kits comprising
CC   probes which hybridise to GPCR polynucleotides of the invention. The
CC   invention further discloses variants of the GPCR polypeptides and vectors
CC   comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may
CC   be used in the diagnosis, treatment or prevention of a wide variety of
CC   diseases including neurological disorders (e.g., Alzheimer's disease,
CC   depression, diabetic neuropathy, Parkinson's disease or schizophrenia);
CC   disorders of the adrenal gland; disorders of the colon or intestine
CC   (e.g., Crohn's disease, diarrhoea, food poisoning or irritable bowel
CC   syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or
CC   myocardial infarction); muscular disorders (e.g., blood disorders (e.g.,
CC   anaemia or leukaemia); immune disorders (e.g., autoimmune disorders or
CC   AIDS); bone and joint disorders (e.g., osteoarthritis, rheumatoid
CC   arthritis, gout or osteoporosis); metabolic or nutritive disorders (e.g.,
CC   obesity, enzyme deficiency-related diseases or vitamin deficiency-related
CC   diseases); and disorders of the kidney, liver, lung, breast, ovary,
CC   uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and
CC   thyroid (e.g., cancer). The present sequence represents a GPCR-encoding
CC   nucleic acid of the invention. Note: The full sequence data for this
CC   patent did not form part of the printed specification; those sequences
CC   not shown were obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

XX
CC   The invention relates to a gene expression profile comprising one or more
CC   genes (ABZ34889-ABZ35692) and generated from a cell type. The cell type
CC   is a coronary artery endothelium, umbilical artery or vein endothelium,
CC   aortic endothelium, dermal microvascular endothelium, pulmonary artery
CC   endothelium, myometrium microvascular endothelium, keratinocyte
CC   epithelium, bronchial epithelium, mammary epithelium, prostate
CC   epithelium, renal cortical epithelium, renal proximal tubule epithelium,
CC   small airway epithelium, renal epithelium, umbilical artery smooth
CC   muscle, neonatal dermal fibroblast, pulmonary artery smooth
CC   muscle, mesangial cells, coronary artery smooth muscle,
CC   dermal fibroblast, neural progenitor cells, skeletal muscle, astrocytes,
CC   aortic smooth muscle, uterine smooth muscle, lung fibroblast,
CC   bronchial smooth muscle, mesangial cells, coronary artery smooth muscle,
CC   osteoblasts or prostate stromal cell. The gene expression profile is used

```
CC   for determining the level of RNA expression for a sample, determining the
CC   phenotype of a cell and distinguishing cell types. The gene or a protein
CC   expression profile is useful in identifying disease pathologies involving
CC   alterations of gene expression. The assessment of expression profiles may
CC   provide meaningful information with respect to tumour type and stage, and
CC   treatment methods, and prognosis. The gene or protein expression profile
CC   may also be used for creating microarrays. The microarray is useful for
CC   genetic and physical mapping of genomes, DNA sequencing, genetic or
CC   medical diagnosis, genotyping of organisms, confirming cell or tissue
CC   identifications and in identifying promising antibiotics, antiviral or
CC   antifungal agents

```
CC   array element in a microarray for monitoring the expression of a number
CC   of target polynucleotides. The microarray is particularly useful in the
CC   diagnosis and treatment of cancer and immunopathology and neuropathology.
CC   The microarray is useful in diagnostics and treatment regimens, drug
CC   discovery and development, toxicological and carcinogenicity studies,
CC   forensics and pharmacogenomics. The microarray is also useful for
CC   monitoring progression of diseases and for developing sophisticated
CC   profiles for the effects of currently available therapeutic drugs. The
CC   combination is also useful for purifying a subpopulation of mRNAs, cDNAs
CC   and genomic fragments and in research and diagnostic applications. The
CC   array can detect changes in expression in a large number of genes coding
CC   for different signaling pathway populations which can be used to diagnose
CC   various diseases including cancer e.g. adenocarcinoma and leukaemia,
CC   immunopathies e.g. AIDS and asthma, neuropathies e.g. Alzheimer's disease
CC   and Parkinson's disease. The present sequence represents a polynucleotide
CC   probe of the invention. Note: The sequence data for this patent did not
CC   form part of the printed specification but was obtained in electronic
CC   format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=06500938B1

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RESULT 3
LOCUS   AK139417
DEFINITION Mus musculus 10 days neonate cortex cDNA, RIKEN full-length
            enriched library, clone:A830005B12 product:cannabinoid receptor 1
            (brain), full insert sequence.
ACCESSION   AK139417
VERSION   AK139417.1 GI:74228276
KEYWORDS   HTC; CAP trapper.
SOURCE   Mus musculus (house mouse)
  ORGANISM Mus musculus
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia;
            Sciurognathi; Muroidea; Muridae; Murinae; Mus.

                     /dev_stage="embryo 13.5,14.5,16.5,17.5dpc"
                     /note="Organ: Brain; Vector: pYX- Asc; Site_1: EcoR I;
                     Site_2: Not I; The library was constructed according to
                     Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
                     1996. Denatured RNA was size fractionated on a 1% agarose
                     gel. First strand cDNA synthesis was primed with oligo-dT
                     primer containing a Not I site. Double strand cDNA was
                     size selected according to mRNA size fraction, ligated
                     with EcoR I adaptor, digested with NotI and then cloned
                     directionally into pYX-Asc vector. The library tag
                     sequence located between the Not I site and the polyA tail
                     is AGGAGACAG. This library was created for the University
                     Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
                     Developing Mouse Nervous System', supported by National
                     Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,
                     program coordinator."

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                  Pred. No. is the number of results predicted by chance to have a
                  score greater than or equal to the score of the result being printed,
                  and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RESULT 14
US-10-641-643-1469
Sequence 1469, Application US/10641643
Publication No. US20040077003A1
GENERAL INFORMATION:

APPLICANT: Cocks, Benjamin G.
Susan G. Stuart
Jeffrey J. Seilhamer

TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF BLOOD CELL
GENE EXPRESSION

NUMBER OF SEQUENCES: 1508

CORRESPONDENCE ADDRESS:
ADDRESSEE: INCYTE PHARMACEUTICALS, INC.
STREET: 3174 PORTER DRIVE
CITY: PALO ALTO
STATE: CALIFORNIA
COUNTRY: USA
ZIP: 94304

COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Word Perfect 6.1 for Windows/MS-DOS 6.2

CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/10/641,643
FILING DATE: 14-Aug-2003
CLASSIFICATION: <Unknown>

PRIOR APPLICATION DATA:
APPLICATION NUMBER: <Unknown>
FILING DATE: <Unknown>

ATTORNEY/AGENT INFORMATION:
NAME: Zeller, Karen J
REGISTRATION NUMBER: 37,071
REFERENCE/DOCKET NUMBER: PA-0001 US

TELECOMMUNICATION INFORMATION:
TELEPHONE: (650) 855-0555
TELEFAX: (650) 845-4166

INFORMATION FOR SEQ ID NO: 1469:
SEQUENCE CHARACTERISTICS:
LENGTH: 2135 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
TOPOLOGY: linear

IMMEDIATE SOURCE:
LIBRARY: GENBANK
CLONE: 9736236
SEQUENCE DESCRIPTION: SEQ ID NO: 1469 :

US-10-641-643-1469

Query Match 95.2%; Score 1256.2; DB 8; Length 2135;
Best Local Similarity 99.4%; Pred. No. 0;
Matches 1261; Conservative 0; Mismatches 8; Indels 0; Gaps 0;

[The remainder of the page consists of nucleotide sequence alignment rows labeled "Qy" (query) and "Db" (database), showing aligned DNA sequences with position numbers. The alignment is rotated on the page.]

RESULT 15
US-10-101-510-409
Sequence 409, Application US/10101510
Publication No. US20030148295A1
GENERAL INFORMATION:
APPLICANT: WAN, JACKSON
APPLICANT: WANG, YIXIN
TITLE OF INVENTION: EXPRESSION PROFILES AND METHODS OF USE
FILE REFERENCE: 15117.0012
CURRENT APPLICATION NUMBER: US/10/101,510
CURRENT FILING DATE: 2002-03-20
PRIOR APPLICATION NUMBER: 60/276,947
PRIOR FILING DATE: 2001-03-20
SOFTWARE: Patentin Ver. 2.1
NUMBER OF SEQ ID NOS: 805
SEQ ID NO 409
LENGTH: 5651
TYPE: DNA
ORGANISM: Homo sapiens
US-10-101-510-409

Query Match   95.2%; Score 1256.2; DB 7; Length 5651;
Best Local Similarity   99.4%;
Matches 1261; Conservative 0; Mismatches 8; Indels 0; Gaps 0;

[Sequence alignment of Query (Qy) against Database (Db), positions approximately 52–1528, presented as paired Qy/Db rows with alignment markers.]
